Subject: High Voltage Power Lines in Phillips Neighborhood
Date: Monday, April 04, 2011 11:28:50 AM

Dear Bill,
I live in the proposed area for introduction of high voltage power lines. I have attended other meetings but have not been able to attend these current meetings so wanted to ask you via e-mail to please find another way to bring the increased power that Xcel and the businesses are asking for.

-When evaluating alternatives, the long term payback and economic impact should be considered rather than just upfront costs.We have an opportunity to develop a forward thinking plan for city neighborhoods to avoid the dangers of high voltage lines through densely populated areas. And develp newer sources (like wind, solar, and local power plants) of electrical power that is less wasteful and does not harm the enrvironment.

-Since many area residents submitted comments during the routing/siting process, including many comments about need and comments on the scope of the Environmental Impact Statement, all of these comments should be included in the CON process.

-Externalized costs of the project should be included rather than only monetary costs, including health and environmental implications of the lines.

-Include Environmental Justice implications of the project in ER, considering the disproportionate impact of environmental toxins borne by Phillips residents who are majority low-income, indigenous and people of color.

-Realistic magnetic field modeling should be included based on the *capacity* of the line.

-In order to effectively assess alternatives, each alternative strategy needs to be evaluated as part of a comprehensive package rather than singly.

-When evaluating what's possible, national best practices, e.g. highly effective case studies, should be used rather than only Xcel's programs

which have relatively low adoption rates.

There may be companies that can install solar panels in the neighborhood like what was worked out at the Seward Co Op in adjacent Seward neighborhood. There are better ways to resolve this issue
thank you
Linnea Hadaway
