Xcel MOU Template

Informational Pamphlet Relating to Solar for Schools

This Pamphlet provides certain background information that a School in Xcel Energy ("the Company") service territory may consider when intending to apply to or participate in the Solar for Schools grant program managed by the Minnesota Department of Commerce, under Minnesota Statutes § 216C.375.

The costs to interconnect to the distribution network of Northern States Power Company (the Company, or Xcel Energy) can be highly variable due to many different factors. The Company will provide a high level good faith cost estimate in an Interconnection Agreement. The customer is responsible for payment of all applicable costs of interconnection.

The Company cannot provide a projection of future retail rates for electricity. Past rates, and the level of changes to past rates, are not a predictor of what future retail rates will be.

You may consider hiring a consultant to help with your assessment as to whether solar is appropriate for your circumstances.

Solar for Schools Checklist and Application Information: [Check All]

System Interconnection:

☐ Applicant has verified that the legal entity receiving retail electric service is the same legal entity identified as the interconnection customer for the Interconnection Application.

System Impact on Grantee Electric Tariff:

☐ Applicant has verified their tariff options, rate class and historical billing by contacting their account manager. (If the school doesn't have a specific account manager, they can follow up with the Business Solutions Center.)

Solar for Schools Project Number _____

Interconnection Application Number _____

Grantee Name (School Name) _____

Signature

I acknowledge that I understand the above information as an electric service customer within Xcel Energy's service territory.
