

**Mesaba Energy Project, PUC Docket No. E6472/GS-06-668**

**DOE Draft EIS for the Mesaba Energy Project (DOE/EIS-0382D)  
Comments on Draft EIS**

**With regard to the above item I would like to say:**

**It appears that this proposed facility would be one of the dirtiest in the State. Sequestering of carbon is not a proven technology and even if it were the carbon would have to be piped hundreds of miles to be sequestered. Mesaba's talk about sequestration of carbon is just that-"talk". I am surprised that the people responsible for the analysis of the proposal even consider it. I hope you will not listen to our uninformed politicians and that you will kill this proposed project.**
