

I oppose the Sandpiper pipeline!

PUC Docket: 13-474

This proposed expansion of Enbridge's pipeline network would perpetuate extreme climate disruption. The Sandpiper would enable even more extraction and burning of dirty Canadian tar sands and fracked Bakken oil, while climate science tells us we need to be keeping this oil in the ground for a livable future.

There are clean alternatives to petroleum and it's past time for the US to develop a more sustainable fuel source.

MN is in danger of a grave accident from spill!
This pipeline takes us backwards, the world backwards - relying on dirty oil to pollute our environment more. Plus, the danger from a spill is assured - just look back & see what damage has already been done.

Please, please reconsider - harming the Great River, damaging all kinds of fields, wild rice included, and the basic fact this oil is not for the USA, but for export & profit-making for the BIG COMPANIES!

I am sure a safer route for a pipeline can be found rather than this route which crosses the Mississippi too many times and threatens wild rice lakes. The tar sands oil is not for us in Minn. or U.S. anyway. Note: pipelines can do 100 times the damage of rail tankers!

Each time I hear of another burst pipeline (or another derailed train), I imagine the horror that would occur if any pipeline - or railcar - burst for whatever reason near the MN River, Mississippi River etc. If Germany can produce so much renewable energy, why can't we?
