Project Description

Minnesota Power proposes to:

- Build two five-mile 115kV transmission lines
- Build a new substation

The proposed project is located near Coleraine, Minnesota.

Process Information

Before the project can be built, the Public Utilities Commission (Commission) must approve a route permit. Minnesota Power's route permit application was accepted in December 2013. The Commission's decision-making process takes six to nine months.

The Department of Commerce is preparing an environmental assessment for this project. The environmental assessment reviews the potential human and environmental impacts of the proposed project and alternatives, as well as ways to address impacts. The environmental assessment will be issued on April 4, 2014.

Judge Mihalchick will use information gathered at the public hearing and during the comment period to write a report for the Commission. The report will include findings, conclusions, and recommendations about this project. After receiving the Judge's report, the PUC will make final decisions on this project at a separate meeting, expected by July 2014.

Eminent Domain: If issued a route permit by the Commission, Minnesota Power may exercise the power of eminent domain to acquire land for this project.
