I would like to make a comment on Docket # ET-6TL-14-665:

This Transmission Line would service a new Enbridge Energy Company Pumping Station, if the proposed Enbridge Energy Company's Sandpiper Project is approved. If the Sandpiper Project is approved, there will be about a 2 year construction project at the proposed site. After that, Enbridge would probably have to employ another 5 to 10 men permanently to man that site. If the construction project goes thru, it will be a large economic boost to our area. After the construction phase would end, and another 5 to 10 high paying jobs would be permanently added to our area, this would be a continuing economic boost to our area. This project, if the Sandpiper Project goes thru, is vital to the economic well being of our area. I do not believe there will be any negative environmental impacts on our area due to this transmission line. This line will pass thru about 800 feet of our property. We have already signed an easement for this.

Thank you;

Jim Gustafson
