Dr. Burl W. Haar
Executive Secretary
Minnesota Public Utilities Commission
121 7th Place East, Suite 350
St. Paul, MN 55101

RE: Yankee Doodle – Pilot Knob 115 kV System Upgrades

Dear Dr. Haar:

In accordance with the Power Plant Siting Act, Minn. Stat. § 216E.05, subd. 3, this letter, filed via eFiling, serves as the required notice to the Minnesota Public Utilities Commission (Commission) that Great River Energy, Dakota Electric Association, and Xcel Energy have elected to seek local approval to make several 115 kilovolt (kV) system improvements in the City of Eagan in Dakota County, Minnesota.

The utilities have determined that a portion of the transmission system serving the City of Eagan service area requires upgrading to reliably serve growing electrical loads, and are proposing the following 115 kV transmission upgrades (see enclosed fact sheet/map) within the City of Eagan:

Great River Energy

Great River Energy will rebuild approximately one mile of Xcel Energy's existing single circuit, 115 kV transmission line (currently operated at 69 kV) to a double circuit, 115 kV line from the Yankee Doodle Substation south to Wescott Road. Xcel Energy will own the poles and one circuit that will operate at 115 kV and Great River Energy will own the other circuit that will operate at 69 kV to restore the 69 kV loop feed to the Wescott Park Distribution Substation.

Xcel Energy

Xcel Energy will construct a 115 kV line from the Pilot Knob Substation to the Eagan Substation by:

- Upgrading approximately 1.5 miles of existing single circuit, 115 kV transmission line (5525 line) to double circuit, 115 kV line from the Pilot Knob Substation to the intersection with Xcel Energy's 0703 line approximately ¼ mile east of Lexington Ave.

- Upgrading approximately ½ mile of Xcel Energy's existing single circuit, 69 kV transmission line (0703 line) to single circuit, 115 kV line from the previously described intersection north to the Eagan Substation.

Substations

Dakota Electric Association will rebuild the Eagan Substation from 69 kV to 115 kV. The project will also include a new exit at Dakota Electric Association's Yankee Doodle Substation, minor modifications to Xcel Energy's Lone Oak Substation, and a new 115 kV breaker at Great River Energy's Pilot Knob Substation.

The project is located in Sections 11, 14, 23, 26 and 27, T27N, R23W. The upgraded transmission lines will be constructed using steel poles approximately 70-80 feet tall, and construction will be accomplished within the existing easements.

The utilities intend to permit the project through the City of Eagan. A plat approval application for building permit issuance was submitted to the City on May 27, 2009. The City of Eagan has been informed that it has 60 days to refer the permitting process to the Commission.

Questions regarding this project should be directed to Russ Matthys, City of Eagan at 651-675-5646; Carole Schmidt, Great River Energy at 763-445-5214; Craig Knudsen, Dakota Electric Association at 651-463-6332; or Tim Rogers, Xcel Energy at 612-330-1955. Thank you for your attention to this matter.

Sincerely,

GREAT RIVER ENERGY

Project Need
Great River Energy (GRE), power supplier to Dakota Electric Association (DEA), and Northern States Power, doing business as Xcel Energy, have determined that the transmission system serving the City of Eagan service area requires upgrading to reliably serve growing electrical loads.

A number of facilities in the area between Yankee Doodle Road and Diffley Road will be upgraded to uniformly operate at 115 kV, including segments of transmission line from the Yankee Doodle Substation south, through the Eagan Substation, to the Pilot Knob Substation.

Proposed Project
The project will be constructed in two phases (see map on back):

1) Great River Energy will rebuild approximately one mile of Xcel Energy's existing single circuit, 115 kV transmission line (currently operated at 69 kV) to a double circuit, 115 kV line (Figure 1) from the Yankee Doodle Substation south to Wescott Road. Xcel Energy will own the poles and one circuit that will operate at 115 kV and Great River Energy will own the other circuit that will operate at 69 kV to restore the 69 kV loop feed to the Wescott Park Distribution Substation.

2) Xcel Energy will construct a 115 kV line from the Pilot Knob Substation to the Eagan Substation by:

- Upgrading approximately 1.5 miles of Xcel Energy's existing single circuit, 115 kV transmission (5525) line to double circuit, 115 kV line (Figure 1) from the Pilot Knob Substation to the intersection with Xcel Energy's 0703 line approximately ¼ mile east of Lexington Ave.

- Upgrading approximately ½ mile of Xcel Energy's existing single circuit, 69 kV transmission (0703) line to single circuit, 115 kV line (Figure 2) from the previously described intersection north to the Eagan Substation.

The upgraded transmission lines will be constructed using steel poles approximately 70 – 80 feet tall and construction will be accomplished within the existing easements. The project will also include a new exit at DEA's Yankee Doodle Substation, rebuild of DEA's Eagan Substation from 69 kV to 115 kV, minor modifications to Xcel Energy's Lone Oak Substation, and a new 115 kV breaker at GRE's Pilot Knob Substation.
