

Photo #10- Garlic Mustard

Photo #11– Garlic Mustard

Photo #12. Red cedar is colonizing even the remaining higher quality portions of the site and aspen has become established in many of the lower wet areas. The site appears not to have been burnt in the last twenty years (or more) given the age of the fire intolerant trees on the site.

Photo #13

Photos #14 – 17. The site has been and continues to be impacted by illegal dumping, and erosion due to ATV and vehicular traffic.

Photo #14 – Past episode of illegal dumping
