

## IMPROVEMENTS RECOMMENDED

It is recommended that the interior of the main building be remodeled. The present large ward system and remote location of wash rooms and nurses' service rooms make it difficult to give patients on bed care adequate nursing service. The construction of this building also makes it impossible to put into operation a contagious technique for proper protection of nurses and other employes; neither can newly admitted patients be protected from known positive sputum cases during the period of observation. The wards should be remodeled into single and double rooms. The administrative wing should also be remodeled into observation rooms for the study of incoming patients.

Our sewage system was built for a smaller institution than we now have, and is inadequate for our needs.

We also recommend that additional land be bought at the east farm to provide an approach from the highway, reducing the round-trip distance five miles.

A fence, with a gateway, should be constructed for enclosing residences from grounds to insure privacy to employes off duty. This enclosure should be of a type approved by the architects.

An appropriation should be made for acquisition of a portion of the local cemetery to provide for burial of patients when necessary. This should include a stone with proper inscription.

## NEEDS OF THE INSTITUTION

The following appropriations are recommended: Remodeling interior of main building, \$75,000; equipment for admitting hospital, \$5,000; new silo at farm, \$500; granary, \$2,500; enlarging sewage system, including one new tank, \$15,000; fencing for private residences, \$15,000; new telephone switchboard, \$13,000; acquisition and improving of portion of local cemetery, \$2,500.

Respectfully submitted,

H. A. BURNS,

Superintendent.

## Hospital for Crippled Children, St. Paul

Minnesota has the distinction of being the first of the states to attempt the treatment of indigent crippled and deformed children at public expense. The legislature in 1897 granted an appropriation of \$5,000 to be used for this purpose. Arrangements were made to have the children cared for at the City and County Hospital, St. Paul. The present institution was authorized by act of the legislature in 1907, and was opened in 1911. The medical and surgical staff is made up of the foremost specialists of St. Paul and Minneapolis. These men are on call at all times, and the services given these poor children are entirely gratuitous and unlimited. The resident medical and surgical staff is composed of one physician who is doing advanced work in orthopedics and pediatrics and two internes. The buildings are the main building with large additions, power plant and laundry, and a service building containing central kitchen, bakery, dining room, root cellar, storerooms, steward's office and rooms for twenty-two employes. A new school building, known as the Michael J. Dowling Memorial Hall, and used for the education and training of indigent crippled and deformed children of the state of Minnesota, has been completed and occupied. The sum of \$50,000, representing one-half the cost of this building, was donated by the Minnesota Editorial Association and the Minnesota Bankers Association.

### To the State Board of Control:

During the past two years more children have been taken care of, more operations have been performed, and more work has been done at the Gillette State Hospital for Crippled Children than during any other previous biennial period.

The state of Minnesota for the past thirty-five years has taken care of its crippled and deformed children by means of state aid, and was the first state in the Union to secure aid through appropriation by its own legislature. During all these years the staff of the hospital has continued to serve without remuneration. During the past years state and charitable institutions have made great inroads upon the private practices of the many physicians represented on the staff; in fact, it is unusual to have any great number of children come to orthopedic surgeons for treatment as private patients. The greater portion of orthopedic surgery at this time is being done through charitable aid. In many states financial return is given to the staff for services rendered. While it is my personal wish to thank the staff for the coöperation and excellent service making the work done at this institution possible, I feel in turn that the Board of Control should follow the plan outlined by various other states of the Union which now not only give care to the crippled children but in some small way recompense their staff for services.

During the last year we have had the misfortune to lose one of our oldest members of the staff, Dr. J. B. Brimhall, and one of the most active members of our staff, Dr. A. E. Flagstad.

#### HOUSE STAFF, SUPERINTENDENT AND NURSES

Many members of the attending staff appreciate the coöperation, interest and loyalty given the children by the superintendent of the hospital, the various heads of departments, and the nurses in the institution. A great portion of the tedious work done in this institution is carried on by these individuals, and without their support the medical staff would be of no great value. I can but thank the various members of the house staff for their coöperation and willingness in the welfare of the state's crippled children.

The establishment of a competent physiotherapy department which has been functioning the last several years is the most valuable addition to the institution. We have been fortunate to secure the services of physiotherapists of the very highest type who have given of their time with great benefit to the children of the institution.

Our present arrangement of resident physician and internes from various institutions is most satisfactory, and we have no trouble in securing very competent physicians to fill these places. The work done by these physicians has been very gratifying and, in turn, has given them extremely valuable training during the time spent in the institution.

#### DENTAL SERVICE

The value of this department cannot be overlooked. Practically all of the individuals coming into the institution need dental care. The work has been carried on by a resident dentist and through consultation from the outside.

### OCCUPATIONAL THERAPY AND SCHOOL TRAINING

The Michael Dowling Memorial Hall continues to be most valuable through its staff in the school-training of children. Not only do the children keep up with their average grade work, but various types of occupations are prescribed and given which are beneficial in the treatment of various deformities found in this institution, and as the years go by more training and more occupations are found for the handicapped child. School work and occupational therapy make the long hours pass more rapidly and are of great advantage in the treatment usually given crippled children.

### SOCIAL SERVICE

We have need at the Gillette State Hospital for a very competent social service department and a department in which follow-up care can be given to the children throughout the state. While in the greater number of instances we feel very positive that the children residing at the hospital are those deserving of such care, we are of the opinion that a competent individual making an investigation as to the financial rating is desirable. There are some counties in Minnesota that do not have visiting nurses, and have no check-up upon children or individuals returning from institutions. We feel that at least one or two individuals competent in this type of work should be secured, in order that children who are able to go home may leave at an earlier date and be visited at home, and, if necessary, be brought back to the institution at the proper time.

### CONCLUSION

As Chief-of-Staff I can but thank, with the visiting physicians of the staff, the Board of Control for their coöperation, advice, and interest in this institution. I feel that it is only through the encouragement received from the work done and the hearty coöperation of all departments that the physicians and surgeons of the staff continue to carry on the work at the institution.

Respectfully submitted,

C. C. CHATTERTON,

Chief-of-Staff.

---

### REPORT OF THE SUPERINTENDENT

*To the State Board of Control:*

The following report is respectfully submitted for the biennial period ended June 30, 1932.

### POPULATION

There has been a slight increase in the daily average during this period. The time in the hospital has averaged a little over six months. The waiting list at present is 145.

## TRAINING SCHOOL FOR NURSES

The reason for the maintenance of this School of Nursing is to give adequate care to the patients and careful instruction in both theory and practice to the postgraduate and affiliate students who are sent to us from their various schools of nursing.

The marked progress while here is made possible through the unfailing interest and time given both in the lecture room and clinics which here continue throughout the year. In other schools of nursing the vacation period from lectures and classes extends from early June until the middle of September. I wish to acknowledge the debt we owe these busy men and women for their share in the upbuilding and maintaining of a more adequate preparation for this constantly changing group of students who are to go into the nursing profession and give, because of their opportunity, better nursing care.

During the past year child psychology has been added to the lecture schedule, and while this series is mainly intended for the benefit of the postgraduate students, affiliate students may attend as many lectures as their period of affiliation covers. *This gives our students an opportunity for deeper study, greater understanding, interest and sympathy for the child and his problems.*

The demand for affiliation is constantly increasing, and if housing space would permit many more students than the number enrolled could receive instruction and experience here.

There has been a great deal of illness among the personnel in the nursing department during the past two years, particularly among the affiliate students. We wish to express our debt to the attending staff of physicians on all services who have given so much of their time and unfailing interest and instruction in correcting and preventing further complications due to medical, surgical, orthopedic or dental conditions or potential.

In the postgraduate group listed for the past two years, three have failed to complete their work; one left due to illness at home; two had not realized that theoretical as well as practical work is required.

Among the affiliate students one decided to return to her previous occupation of clerk; one left to be married; one had already married; another had decided not to put in further time in any school. The two on sick-leave, one early tuberculosis and one otitis media, are both scheduled to return and complete their affiliation when their home schools have found their health sufficiently reliable to allow them to do so. Of the two suspended, one has returned and completed her affiliation; the other is to return when she has satisfactorily completed all other work in another affiliate school.

In order to maintain and advance these students we must continue to give to them the same careful supervision and instruction that we have main-

tained in the past. I therefore wish to make acknowledgment to the ward supervisors, and to all others who have shared in the work, for their contributions toward its increasing success.

#### EDUCATIONAL WORK

Time is an important factor in any business. It is an outstanding one in considering each year's work in a hospital school. Within a nine months' term, with weekly admittances and discharges resulting in a floating population, every minute allotted to the school department must count.

Patients are realizing fully the benefits of being in a hospital with educational privileges. Lessons must be studied, recitations heard and credits earned between visits to the dentist, x-ray, sun treatments, physiotherapy, dressings, medications, clinics, rest hours and all other important treatments. Plans are formed by students and instructors in each individual case for make-up work in study and recitation periods lost during operative and postoperative care. It becomes an interesting game. While patients yield to each other in most all affairs, the majority jealously guard the minutes allotted to them for special instruction.

From nine in the morning until four in the afternoon, with a two-hour noon intermission, the instructors divide pupils and minutes so that at the end of the week each student shares equally. Our daily schedule is never quite the same, some days minute and other days great changes must be made in the school program to accommodate the necessary and unavoidable change in routine schedule or possible quarantine in a ward.

One hundred fifty-nine credits have been received from the State Department of Education by junior and senior high-school students in the past two years. The knowledge that any credit, whether it be of one month's or one year's time, is accepted at home has been of great encouragement to the older patients. The closer coöperation and understanding of the needs of these students by their home school in the past two years has enabled many patients to re-enter school, upon their hospital discharge, at any time during the school year instead of waiting until the next term or the beginning of a new school year. High-school girls or boys should have no great period of idle time, whether at home or in the hospital.

As all patients are from this state, the Minnesota curriculum is used. In special instances the students' home tests and outlines have been followed. Any adjustment in our courses which will enable the discharged patient to continue his work at his home school is made.

Four senior boys passed their examinations this June and now have their diplomas. The average patient with a desire to study, even with only the minimum individual instruction daily, can accomplish much. The work in the senior high-school department has nearly doubled in 1931-1932.

The splendid coöperation of our instructors makes the programs run smoothly notwithstanding the numerous emergency interruptions. They conserve each other's time by combining supervised study and recitation periods. They share each other's outside classroom duties to allow one another to spend a few extra minutes with some student in need of special help. In this earnest desire to see the patients advance, the teachers give most willingly their best efforts, thoughtfulness and ideas. This is deeply appreciated and makes possible the splendid results accomplished in our school department.

#### IMPROVEMENTS

A new refrigerating machine has been installed and cold-storage rooms added; also additional space for ice.

The steward's storerooms have been completely done over.

Two sun rooms were built with money left for permanent improvements by Henry Hovey Dickey and Herman Benz. Both rooms were equipped completely with money left by E. J. Seitz.

Four screened porches have been added with money left from the Christmas fund raised by the St. Paul Daily News.

New laboratory equipment has been added, including an x-ray machine and a microscopic instrument for the laboratory and operating room. Instruments for the operating room, an operating table and other equipment have been supplied.

The isolation department has been completely remodeled in order to meet the requirements of the State Board of Health in caring for contagious cases here. Running water and toilet facilities have been added to each ward.

All gutters and lead pipes on the building have been repaired and put in order.

Stucco and cement walls have been repaired where needed.

The painted exterior of the building has all been repainted, and the Michael Dowling Memorial Hall has been completely cleaned and painted during this period.

The walls and ceilings of all wards, service rooms and operating room are washed monthly and painted when necessary.

The shop has provided all braces and appliances during this period and has proved very satisfactory. There is less delay in getting the braces and we are having much less repair work done.

The Masonic Women built a rock garden east of Ward IX.

The St. Paul Daily News fund provided for new gardens between Wards I and V.

## NEEDS OF THE INSTITUTION

We need a nurses' home to provide adequate room for student nurses. The rooms now used by the student nurses will be used by the personnel and maids for whom we are now renting in the neighborhood. We need equipment and furniture for the nurses' home.

We need to complete the ground floors of the East Wing to be used as a laboratory, lecture room, morgue, and autopsy room. Our present laboratory does not comply with the requirements of the standards of the American College of Surgeons for a hospital doing the amount of work done here.

We need sufficient classroom space for doctors', nurses', physiotherapists' and dietitian's lectures without taking the space provided for classrooms for the patients.

We have no rooms for the preparation of the dead or autopsy purposes.

We need cement platforms for garbage cans, with hose connections, and an incinerator.

Radiators and exposed steam pipes should be covered to prevent injury to the patients from burning.

The tile roofs need overhauling and considerable repair.

Window screens on the old part of the building need to be repaired.

Linoleum floors need to be replaced in some of the wards and in the Out-Patient department.

Appropriations are recommended as follows: Repairs, \$8,000; library, \$500; laboratory and operating equipment, \$4,000; cubicles, \$500; special appliances for patients, \$20,000; instruction and amusement, \$4,000; furniture and equipment, \$4,000; nurses' home, \$91,800; equipment for nurses' home, \$7,500; garbage house, \$1,500; and improving grounds, \$4,000.

## GIFTS, BEQUESTS AND DONATIONS

In 1930 the St. Paul Daily News collected and gave to the hospital \$2,260.46; and in 1931, \$1,815.92.

The income from the Minnesota Editorial Association and State Bankers Association endowment provides a scholarship at the St. Paul School of Art.

The State Fair Board furnishes tickets to all children who can attend the Fair.

The Red Cross furnishes gifts and useful articles throughout the year through the schools.

Members of the Ramsey County Medical Auxiliary mend, sew, mend books, furnish entertainment through story-telling and give new and used garments, games and books to the children.

The Masonic Women mend one day each month, provide a party a year for all children, take sewing home, and furnish books, toys, used and new clothing for patients. They built a rock garden and furnished a garden seat near Ward IX. They subscribe for a number of magazines.

The Shrine gives tickets to the circus yearly and furnishes transportation for all who can attend.

The Knights of Columbus furnish gifts at Christmas and two entertainments a year.

Patrons of the Minneapolis Symphony Association furnish tickets and transportation to each of the Children's symphonies.

The Schubert Club furnishes musicals and entertainment throughout the year.

P. W. Herzog continues to send his car to take the children riding.

The Sunshine Society furnishes flowers, plants, games and jellies.

Individuals, churches, and organizations, continue in their interest and generosity to furnish entertainment, jams and jellies.

The clergymen, priests, Sunday School teachers, Sisters, and other volunteers, continue with their work throughout the year in instructing the children in the different denominations.

The Boy Scouts of America permit our boys to enter into all activities possible, and we are deeply indebted to our scoutmaster, Frederick Dedolph, for his service.

#### CONCLUSION

I wish to express my gratitude to all who assisted in any way in the care and education of the children of this hospital, to the staff and employes for their continued efficiency and loyal service, to the medical and surgical staff whose efforts make the success of this hospital possible, and to the Board of Control for their support and advice.

Respectfully submitted,

ELIZABETH McGREGOR,

Superintendent.
