Enterprise Architecture Office Resource Document Architecture Frameworks

Statement

The State of Minnesota Chief Information Officer has established an Enterprise Architecture Policy that states:

Minnesota will use the best practices developed by *The Open Group Architecture Framework (TOGAF)* – current edition <http://www.opengroup.org/togaf/> and the *Federal Enterprise Architecture Framework (FEA)* <http://www.cio.gov/Documents/fedarchi1.pdf>

The policies, standards, guidelines and processes are developed by domain work teams employing industry best practices.

The Enterprise Architecture Office (EAO) will modify or extended TOGAF and the FEA as necessary to complete its work.

Non-State Interactions

This framework selection is not intended to override existing requirements from non-state organizations for structuring interactions between a state executive branch organization and a non-state organization.
