

MINNESOTA ENTERPRISE REAL PROPERTY FACILITY CONDITION ASSESSMENT (FCA) REPORT

2025

ABSTRACT:

The Minnesota Enterprise Real Property Facility Condition Assessment Report is a comprehensive report depicting the conditions of all of Minnesota State's owned buildings in a standardized and objective means. This report is intended to be used to compare agency to agency buildings, and to justify bonding projects and asset preservation funding.

The report is derived from a single enterprise database and application (ARCHIBUS). All assessment data is gathered using the standardized Minnesota Facility Condition Assessment (FCA) Process. This process was a combined effort developed by the Enterprise Real Property Program (ERPP), Facility Engineering Associates (FEA), and a steering team led by key agency representatives in 2013.

MINNESOTA FCA PROCESS:

(FCA) Facility Condition Assessment: Is an industry term that describes the process of professionally analyzing the condition of a group of facilities that may vary in terms of age, design, construction methods, and materials, in order to determine the overall state of the facility. (FCA is essentially a method for walking through a building, rating the conditions of various building systems, and documenting the information to get an overall picture of what state the building is in.)

The standardized Minnesota FCA Process is based on the Backlog of Maintenance and Repair (BMAR) FCA Process approach.

“The “BMAR FCA Process” is named after the process developed by NASA in the 1990s in response to the need to develop a more reliable FCA process with a reasonable level of effort.”

(FEA, 2013)

All costs generated by the Minnesota FCA Process and ARCHIBUS application are derived from up-to-date RS-Means Construction Costs. The BMAR approach required the following to be developed to implement the standardized Minnesota FCA process:

- **Development of 23 Cost Models;**
- **Standardizing how Current Replacement Value (CRV) will be calculated;**
- **An agreed upon 1-5 scoring method;**
- **Standardizing how Deferred Maintenance (DM) will be calculated;**
- **Standardizing how Adjusted Deferred Maintenance (ADM) will be calculated;**
- **Standardizing a Facility Condition Index (FCI) calculation and ratings;**
- **Standardizing a Reference Field Guide.**

23 Cost Models:

Developed to address the majority of agency's buildings. The cost models are numbered M01 through M23 and each is based on a combination of type of construction and potential uses. The models are designed based on Level 3 UniFormat II building classification systems. All costs were produced from RS-Means Construction Cost data. Cost data was applied to the cost model's UniFormat classification system ids called cost model matrix ids, or also referred to as system unit costs. The cost model matrix id costs/system unit costs are used to calculate CRV, DM and FCI.

Current Replacement Value (CRV):

Calculated dollar amount representing the estimated cost to replace a building. CRV is based on RS-Means construction costs for basic Labor, Materials, and Equipment. (CRV costs are estimates of original construction and design and DO NOT depict actual construction project costs. Insured values and actual projects for replacement will be higher due to replacement projects rarely ever replacing systems with existing systems or construction, as well as additions of project overhead, fees, demolition, etc.) A system quantity is needed from the building being assessed and is applied as a multiplying factor to the system unit cost to obtain the CRV. CRV is calculated as...

BUILDING CRV = (SUM OF SYSTEMS CRV)

SYSTEMS CRV = (SYSTEM UNIT COST * SYSTEM QUANTITY)

1-5 scoring method:

Systems are scored from 5 (best) to 1 (worst). The score is determined from a combination of conditions based on the established deficiency ranges and the rules established in the MN Field Reference Guide.

Condition rating 1 = **Crisis**
Condition rating 2 = **Poor**
Condition rating 3 = **Fair**
Condition rating 4 = **Good**
Condition rating 5 = **Excellent**

Deferred Maintenance (DM):

DM is maintenance that needs to be performed on a system in order to keep it in optimal condition but was not completed. The DM values are based on the standardization of cost models and the adoption of a rule-based rating system. The DM for a given system is algorithm-based, as required of a 'best practice' FCA process. (DM costs are estimates and DO NOT depict actual construction project costs, but rather routine maintenance costs at the time they were needed.) Applied to each system for a given building, the process yields justifiable, repeatable results. DM is calculated as...

$$\text{BUILDING DM} = (\text{SUM OF SYSTEMS DM})$$

$$\text{SYSTEMS DM} = (\text{SYSTEM CRV} * \% \text{DM})$$

Condition rating 1 = 100% DM

Condition rating 2 = 75% DM

Condition rating 3 = 33% DM

Condition rating 4 = 10% DM

Condition rating 5 = 2% DM

Adjusted Deferred Maintenance (ADM):

The ADM is a lower and more reasonable value than the DM value. It is intended to derive only the local condition rating 1 and 2 items (Crisis and Poor) from all systems regardless of the system rating. The ADM value is perceived as the backlog needed to be taken care of to bring a building's overall condition rating to an acceptable Fair rating. (ADM costs are estimates and DO NOT depict actual construction project costs.) ADM is calculated as...

$$\text{BUILDING ADM} = (\text{SUM OF SYSTEMS ADM})$$

$$\text{SYSTEMS ADM} = (\text{SYSTEM CRV} * \% \text{CRV})$$

Condition rating 1 = 100% CRV

Condition rating 2 = 100% CRV

Condition rating 3 = 3.75% CRV

Condition rating 4 = 1.00% CRV

Condition rating 5 = 0.25% CRV

Facility Condition Index (FCI) calculation and ratings:

The industry standard FCI is the condition metric calculated for each building. The FCI provides an excellent means for maintenance prioritization based on overall building conditions, and provides insight to problem areas, neglected building systems, or where maintenance needs to be applied based on limited funds. FCI is calculated as...

$$\text{BUILDING FCI} = (\text{SUM OF BUILDING DM}) / (\text{SUM OF BUILDING CRV})$$

Rating Scale:

Excellent = *Building FCI < 0.05*

Good = *0.05 < Building FCI < 0.15*

Fair = *0.15 < Building FCI < 0.30*

Poor = *0.30 < Building FCI < 0.50*

Crisis = *Building FCI > 0.50*

Reference Field Guide:

Each assessor receives a Reference Field Guide in which they are trained to use throughout the entire assessment process. The Reference Field Guide along with calibration training maintains objectivity for the FCA process. The guide contains all CSI UniFormat systems that should be evaluated with clear and thorough criteria for rating the condition of each system; criteria such as but not limited to the system performance, visual defects, age of system, observed safety issues and/or hazards.

The State of Minnesota currently has a building portfolio with an **average age of 44 years**.

“The largest and most expensive of all asset renewal projects tend to occur during the 4th life stage. As a result, significant funds will need to be reinvested in the building and the standard operating and maintenance budgets will need to be revisited. Some of the assets have been replaced over the preceding 30-40 years and the owners and manager are now operating a building with assets at a variety of different ages. There is no longer a single baseline and the facility managers are tasked with tracking the different assets.” (<https://www.rdh.com/long-buildings-last/>)

Cheaper to maintain than to fix: The average deferred maintenance per system is \$6 Thousand for buildings in excellent condition, versus \$196 Thousand for buildings in crisis condition. From 2015 to 2025 the deferred maintenance has been increasing and trending toward crisis rather than the desired excellent condition.

10 YEAR PROJECTION SUMMARY:

- Annual average growth of Adjusted Deferred Maintenance (ADM): 7.13%
- Current construction inflation rate based on Mortenson's Cost Index (<https://www.mortenson.com/cost-index/minneapolis>): 5.06%
- Proposed annual funding level to keep Adjusted Deferred Maintenance (ADM) from growing: \$119,622,331
- Proposed annual funding level to eliminate Adjusted Deferred Maintenance (ADM) backlog over 10 years: \$172,506,518

10 YEAR PROJECTION ASSUMPTIONS:

- Funded Asset Preservation (AP) has a direct correlation to Deferred Maintenance (DM) and Adjusted Deferred Maintenance (ADM) (\$1 of AP reduces DM or ADM by \$1)
- Asset Preservation is only used for building maintenance to reduce Deferred Maintenance (DM) and Adjusted Deferred Maintenance (ADM) backlog
- Building asset inventory does not change from year to year (no addition or removal of buildings from the asset inventory)
- CAPRA projects, Bonding Projects, and HEAPR do not affect Deferred Maintenance (DM) and Adjusted Deferred Maintenance (ADM) for this exercise
- A 10-year plan will suffice to reduce Deferred Maintenance (DM) and Adjusted Deferred Maintenance (ADM) backlog
- There are enough current FTEs to carry out maintenance/projects when funded at the projected funding levels
- Annual construction inflation rate for the next 10 years stays at the current 5.06%
- Annual Adjusted Deferred Maintenance (ADM) growth rate for the next 10 years will stay at the current 7.13%

10 YEAR PROJECTION EXCLUSIONS:

- MnDOT FCA data is not included in any of the projections used since they do not receive asset preservation
- Renewal and Replacement needs are not considered
