

Why the Census Matters for Asian American, Native Hawaiian, and Pacific Islander Communities

ARIZONA

Introduction

Every 10 years, the federal government is legally required to **count every person living in the country, regardless of citizenship status**, as part of the U.S. Census. However, certain populations are more likely than others to be missed. Asian Americans, Native Hawaiians, and Pacific Islanders (AANHPIs), people with limited English proficiency, people with low incomes, and young children are some of the groups that are undercounted in the census.

What are the Consequences of Undercounting AANHPI Communities?

The U.S. Census Bureau estimates that 16 million people were not counted in the 2010 Census. AANHPIs have been undercounted for decades, disadvantaging our families, communities, and neighborhoods. Today, roughly one in five Asian Americans and one third of NHPs live in hard-to-count census tracts. Some AANHPI communities are especially at risk of being missed, including those that have limited English skills and/or are low-income.

When AANHPI communities are undercounted, they may not be accurately represented in the process to determine their elected officials. Undercounting also results in AANHPIs being denied a full voice in policy decision-making and federal funding allocated to states and localities where AANHPIs live. Many programs that impact AANHPI communities are based in whole or in part on census data. With a lack of data on AANHPI communities, there is less funding for vital programs such as the Supplemental Nutrition Assistance Program (SNAP), Medicaid, and more.

How Does the Census Impact our Democracy?

There are 435 representative seats in the U.S. House of Representatives, with each representing one congressional district. These seats are allocated throughout the country based on population size as collected in the census. The 2010 Census results caused 12 seats to shift between several states, which translated directly into the shifting of power. The 2020 Census will also determine which states get more and which states get fewer seats in the House of Representatives.

Seat Projection for Arizona in 2020: Arizona is currently projected to have a **total of 9 congressional seats**.

Data from Census Bureau 2017 Population Estimates

Asian Americans	
About 319,842 living in Arizona in 2017.	

Counties with Highest Asian American Populations in Arizona		
1	Maricopa County	238,651
2	Pima County	44,950
3	Pinal County	11,809
4	Yuma County	4,711
5	Cochise County	4,290
6	Coconino County	4,205
7	Yavapai County	3,885
8	Mohave County	3,864
9	Navajo County	1,130
10	Gila County	595

Native Hawaiians and Pacific Islanders	
About 34,909 living in Arizona in 2017.	

Counties with Highest Native Hawaiian and Pacific Islander Populations in Arizona		
1	Maricopa County	22,418
2	Pima County	4,379
3	Pinal County	2,919
4	Yuma County	1,006
5	Cochise County	958
6	Mohave County	936
7	Yavapai County	770
8	Coconino County	657
9	Navajo County	291
10	Graham County	176

Data on race are generally available from the Census Bureau in two forms, for those of a single racial background (referred to as "alone"), with multiracial people captured in an independent category, and for those of either single or multiple racial backgrounds (referred to as "alone or in combination with one or more other races"). These data tables, populations are measured for the "alone or in combination" population.

Why the Census Matters for Asian American, Native Hawaiian, and Pacific Islander Communities

Education

The decennial census helps determine how the federal government allocates more than \$47 billion in federal funding for educational programs each year.

Nationally, Asian Americans and NHPs are less likely than non-Hispanic Whites to hold a high school degree. Among NHP ethnic groups, Marshallese, Fijian, and Tongan Americans are less likely to hold a high school diploma or GED than average. In Arizona, 13% of Asian Americans have less than a high school education.

Nationally, educational attainment of Hmong, Cambodian, Laotian, and Vietnamese Americans are lowest among Asian American ethnic groups and are among the lowest of all racial and ethnic communities.

The census count is used to determine where funding for low income students, bilingual language programs, career and technical education grants, and school lunch goes. Participating in census means more money for critical education programs in your community.

Health

In Arizona, around 18,004 Asian Americans do not have access to health insurance.

While the sample size was too small to provide Arizona-specific health insurance data for NHPs, nationally, about 1 in 7 NHPs don't have health insurance, a rate higher than whites.

If AANHPIs are undercounted and accurate data is not collected about AANHPI communities, federal funding for programs such as Medicaid, Medicare, Children's Health Insurance Program, reproductive health programs, and more will not be adequately allocated to AANHPI communities. Participating in census means more money for critical health programs in your community.

Voting

Census data are used to determine where limited-English speaking voters can access translated ballots and bilingual poll workers. This right is guaranteed by **Section 203 of the Voting Rights Act**, which requires language assistance to be provided for Asian American, Hispanic, American Indian and Alaska Native groups.

Census data are often used by counties under Section 203 to identify which language or dialect to use for written and oral assistance at the polls. For example, a county will use census data to determine whether to hire Cantonese-speaking or Mandarin-speaking poll workers or which polling locations to place bilingual poll workers.

16 Large Census Guided Federal Programs in Arizona

Total	\$13 billion
Program	Funding
Medicaid	\$8 billion
Supplemental Nutrition Assistance Program (SNAP)	\$1 billion
Medicare Part B	\$1 billion
Highway Planning and Construction	\$825 million
Section 8 Housing Choice Voucher	\$174 million
Title I Grants to Local Education Agencies	\$332 million
National School Lunch Program	\$270 million
Special Education Grants (IDEA)	\$189 million
State Children's Health Insurance Program (CHIP)	\$81 million
Head Start	\$190 million
Supplemental Nutrition Program for Women, Infants, and Children (WIC)	\$130 million
Foster Care (Title IV-E)	\$146 million
Health Center Programs	\$74 million
Low Income Home Energy Assistance	\$22 million
Child Care and Development Fund	\$57 million
Section 8 Housing Assistance Payments Program	\$56 million

Language Materials

The Census Bureau will provide language guides, language glossaries, and language identification cards in these Asian languages:

Chinese * Vietnamese * Korean * Tagalog
Japanese * Hindi * Bengali * Thai * Gujarati
Khmer * Nepali * Urdu * Telugu * Burmese
Punjabi * Lao * Hmong * Tamil * Malayalam
Indonesian * Ilocano * Marathi

In-Language Internet Questionnaire & Census Questionnaire Assistance

Chinese * Vietnamese
Korean * Tagalog * Japanese
