

SVL ([www.svl.com](http://www.svl.com) – contact Howard Hoffman [howardh@svl.com](mailto:howardh@svl.com)) has a solution that takes up no floor space, creates negative pressure in each operatory, and HEPA\* filters all the exhaust air from the operatory before returning to the HVAC system for heating or cooling. We provide a 2'x2' or 2'x4' unit that fits in the existing ceiling grid, can be interlocked to operatory lighting or controlled by a standalone switch, and is field adjustable for proper air flow.

(\*HEPA is 99.97% at .3 microns. Option for ULPA, 99.9995% at .12 microns)
