

Residential Tax Credits:

Get paid before they're gone!

In July 2025, H.R. 1 was enacted changing many of the deadlines for federal Clean Energy Incentives.

There's still time to take advantage of the incentives and make upgrades to lower your energy costs! Follow the new deadlines listed below and get your system activated in time. Sections for specific credits are listed below.

Electric Vehicle Credit

\$7,500 credit for new (Section 30D) & \$4,000 for dealer-sold used (Section 25E) electric vehicles will expire September 30, 2025.

Energy Efficient Home Improvement Credit

Individuals who make energy-efficient improvements to their homes, including weatherization/insulation (up to \$1,200), electrical panel upgrades (up to \$600), home energy audits (up to \$150), and purchases of heat pumps (up to \$2,000). Improvements must be placed in service by December 31, 2025. (Section 25C)

Residential Clean Energy Credit

Households that install clean energy including solar, wind, geothermal, fuel cells, or batteries are eligible for 30% tax credit of qualifying costs if the system is in place and activated by December 31, 2025. (Section 25D)

Electric Vehicle Charger Credit

Households that install EV chargers are eligible for a property credit for chargers placed in service by June 30, 2026. (Section 30C)
