Today, we will review what we discussed in the first and second webinars in this series, and we will hear from two of our BHH services providers and their experiences with population health management.
In the first webinar of this series, we discussed the principles of population health management using the Iceberg Model. We also discussed tools to use for population health management.

Developing new skills and a cultural shift to support the initial and ongoing implementation of those skills can be likened to the Iceberg Model. The underlying behaviors, structures, and relationships – the behavioral competencies – support the successful implementation of the knowledge and skills – the technical competencies. We also reviewed the care management reports in the DHS Minnesota partner portal.
During the second webinar, we heard from Guild, Inc., about how they collect data and how they focus on sub populations (specifically people with high ER visits and people with diabetes) to provide interventions and track outcomes.

We also discussed the three Partner Portal reports: chronic condition, provider alert and members lost report.
Allie Harwood is the clinical integration manager for Zumbro Valley Health Center. Today, she will talk about how Zumbro has developed their patient registry and how they use it to track preventative screenings which allows their BHH services team to easily identify care gaps, implement strategies to improve patient care and outcomes through education, referral to primary care and other community partners.
Zumbro: Population Health Management

Prevention, diagnosis, and treatment of an entire population rather than a single person

Utilization of patient registries and databases to identify care gaps

Systematic, targeted interventions based upon data

(Transcript for this slide not available)
Zumbro: where are we now?

Patient registry of required elements for BHH
- Ability to run report from EHR

Focus on dental and physical exams
- Care gap identified during HWA
  - No service established or service overdue
- Intervention
  - Referral is made to primary care/dental or
  - Appointment is scheduled with already established provider
- BHH team to follow through and ensure referral loop is closed or
  appointment is kept
- Address barriers (transportation, accompanying client, etc.)

Much time spent on day-to-day needs of individuals

Database which is not being utilized

2/25/2019

Zumbro – Lessons Learned

Start small

Determine outcomes/indicators that are important to your team, your clients, and your community partners

Talk with IT/data analyst on site if you have one about the best ways to collect and organize the data and reports

(Transcript for this slide not available)
Zumbro: Where are we going?

(Transcript for this slide not available)
Zumbro: First Steps

- Determine what data you want to have in the registry
- Determine what data is already being collected in the EHR
  - Health Wellness Assessment (HWA) – physical exam date, dental exam date, tobacco use screening, tobacco use status
  - Vitals Page – obesity screening date, BMI value
- Determine what data is still needed
  - Cervical cancer screening date, colorectal cancer screening date, breast cancer screening date
- Determine how to obtain the data which is still needed
  - Example: Registry – Preventative Screenings Add screening tool to complete during HWA
  - If age or gender applicable, ask about dates of last colonoscopy, mammogram, PAP screening tests
  - Work with MCOs to obtain the needed information
  - Currently working with UCare to obtain dates of the last screenings for BHH services UCare clients and the dates in which people are due or next eligible for the screening
- Determine how to best enter this data into the EHR
  - Consult IT or data analyst
  - Is there a configurable form already somewhere in the EHR that these data pieces can be easily added to?
  - Do you need to come up with a new form altogether?
US Preventative Services Task Force Recommendation: Colorectal Screening

- Men and women
- Beginning at age 50, continuing at recommended intervals until age 75
- Jane Doe: colorectal screening is “Not applicable” because she is not yet 50 years of age
- Eric Doe: colorectal screening is normal color and font because he is 50 and was screened this year
- Alan Doe: colorectal screening is RED because it was over 12 years since his last screening, which is outside the recommended timeframe
US Preventative Services Task Force Recommendations

- Breast cancer screening: Women, ages 40+, mammography every 1-2 years
- Cervical cancer screening (updated August 2018):
  - Women, ages 21-29: Every 3 years with cervical cytology alone
  - Women, ages 30-65: Every 3 years with cervical cytology alone OR every 5 years with high-risk HPV (hrHPV) testing alone OR every 5 years with cervical cytology and hrHPV combo
- Colorectal cancer screening: Men and women, starting at age 50 and continuing until 75
- Obesity screening and counseling (updated September 2018): Adults, BMI (height and weight), if BMI > 30, refer to intensive, multicomponent behavioral interventions
- Tobacco use counseling and interventions: Non-pregnant adults, ages 18+, screen for tobacco use. Advise to stop using and provide behavioral intervention.
Run report at regular intervals to track progress: daily, weekly, monthly, depending on data tracked

Sorting the data

- Example 1: BMI Value – Sort BMI highest to lowest value to determine which clients are obese/highest risk – Intervention examples: Incorporate motivational interviewing into BHH monthly visits, provide education on healthy diet/exercise – Referral to local fitness center/gym – Referral to HyVee free dietician service for grocery store walkthrough – Referral to community ed. healthy cooking class – Referral to ExercisAbilities® some Medicaid covered programs for those considered pre-diabetic – Coordinate with primary care provider

- Example 2: Smoking Status – Sort to identify who the tobacco users are - Interventions: Incorporate motivational interviewing into BHH monthly visits – Provide education on smoking cessation – Offer QuitPlan resources – Smartphone applications (QuitGuide) – Coordinate with primary care providers

- Example 3: Mammogram: Sort (or utilize automatic indicators – cell should be red) to determine women over 40 who have not had a mammogram | Intervention: Provide a reminder to those individuals via the phone, letter, or in person – Determine if eligible for insurance incentives Example: UCare Rewards and Incentives – some plans offer $50 gift card for getting a screening. If eligible, coordinate with primary care provider to schedule appointment
• Potentially partnering with local community provider
• Identify pre-diabetic clients on BHH caseload/agency-wide. Criteria include:
  o 18+ years of age
  o BMI >/= 25 (or >/= 23 if Asian)
    o No previous diagnosis of type 1 or type 2 diabetes (gestational diabetes mellitus OK)
  o Diagnosis of prediabetes within the past year (must check at least one)
    • HbA1c: 5.7-6.4% (range means higher chance of getting diabetes)

Julie Plante, nurse manager at Vail Place, is here to talk about how Vail identified sub-populations to gather more detailed information that helps provide more intensive interventions.
Vail Care Population Health Journey: The First Year.

Part 1: Identifying Our Subpopulations/Getting Started

Part 2: Initial Challenges & Outcomes

Part 3: A New Action Plan for the Coming Year

(Transcript for this slide not available)
Part I: Identifying Subpopulations

- Initial decision made to focus on 3 subpopulations
- Adults with Type II Diabetes, Obstructive Lung Disease, and/or Chronic Pain r/t Specific Medical Diagnosis
- Intention was to gather more detailed information and offer additional health coaching support and interventions based on standard care pathway for the illness
- Determined methods to gather data and tentative process for how to analyze it and make care recommendations in response

(Transcript for this slide not available)
Part I: Getting Started

- Additional questions asked during HWA
- Records requested to fill in gaps in knowledge
- Care pathways were identified
- Started gathering additional health education and health coaching materials r/t these conditions
Initial challenges/outcomes

Part 2: Initial Challenges/Outcomes

Challenges/Barriers

- Lack of community understanding about what the program is
- Inability to collect data
- Social Determinants of Health
- People being referred were typically in “crisis mode.”
- Difficulty with maintaining engagement
- Lack of time to invest in health coach training and prepping of materials

2/25/2019

(Transcript for this slide not available)
Part 2: Initial Challenges

Resulting in...

- Backlog of requests for info
- Backlog of records to review
- Inability to get traction with targeted interventions
- Staff expected to provide TCM level of service without the TCM access to resources
- Staff feeling overwhelmed with too many competing priorities

(Transcript for this slide not available)
Outcomes

Part 2: Outcomes

Lessons Learned:

- We needed to revamp our data collection plan
- IS/RN needed to provide more instruction and oversight to health coaching/education efforts
- Need for continued education to community partners about the program and how it operates differently than traditional case management models.
- Need to streamline how the work week is organized to promote efficiency and provide time for adequate attention to administrative and follow-up tasks

(Transcript for this slide not available)
Part 3: A New Action Plan for the Coming Year

Smarter Processes

• Eliminating waste: develop new plans for what and when to request data from outside sources
• Creating more standardized questions to ask at intake and at each 6 months thereafter
• Initiating Health Education protocols right at intake with delivery of carefully selected printed materials and tools which can be used by all staff to support members in health goals

(Transcript for this slide not available)
Smarter Staff

- Monthly “lunch and learn” sessions.
- Training the trainers: RN ensuring all staff are capable and competent in the use of all educational materials and self-help tools to be used with our members.
- RN providing summary of health and wellness needs and ideas for interventions on each new client after completion of the HWA.
