

North Central Landscape Resource Atlas

A support document to the 2nd Generation MFRC North Central Landscape Plan

May, 2016

Minnesota Forest Resources Council (MFRC)

Document #<td>

©Copyright 2016, Minnesota Forest Resources Council

Information about the Minnesota Forest Resources Council and the Landscape Program can be found at www.frc.state.mn.us.

Equal opportunity to participate in and benefit from programs of the Minnesota Forest Resources Council is available to all individuals regardless of race, color, creed, religion, national origin, sex, marital status, status with regard to public assistance, age, sexual orientation, or disability. Discrimination inquiries should be sent to the Minnesota Forest Resources Council, 1530 Cleveland Ave. N, St. Paul, MN 55108; or the Equal Opportunity Office, Department of the Interior, Washington, D.C. 20240.

This information is available in an alternative format upon request.

Document prepared by: MFRC North Central Landscape Committee and MN DNR PFM Staff (Jeff Reinhart).

User's Guide

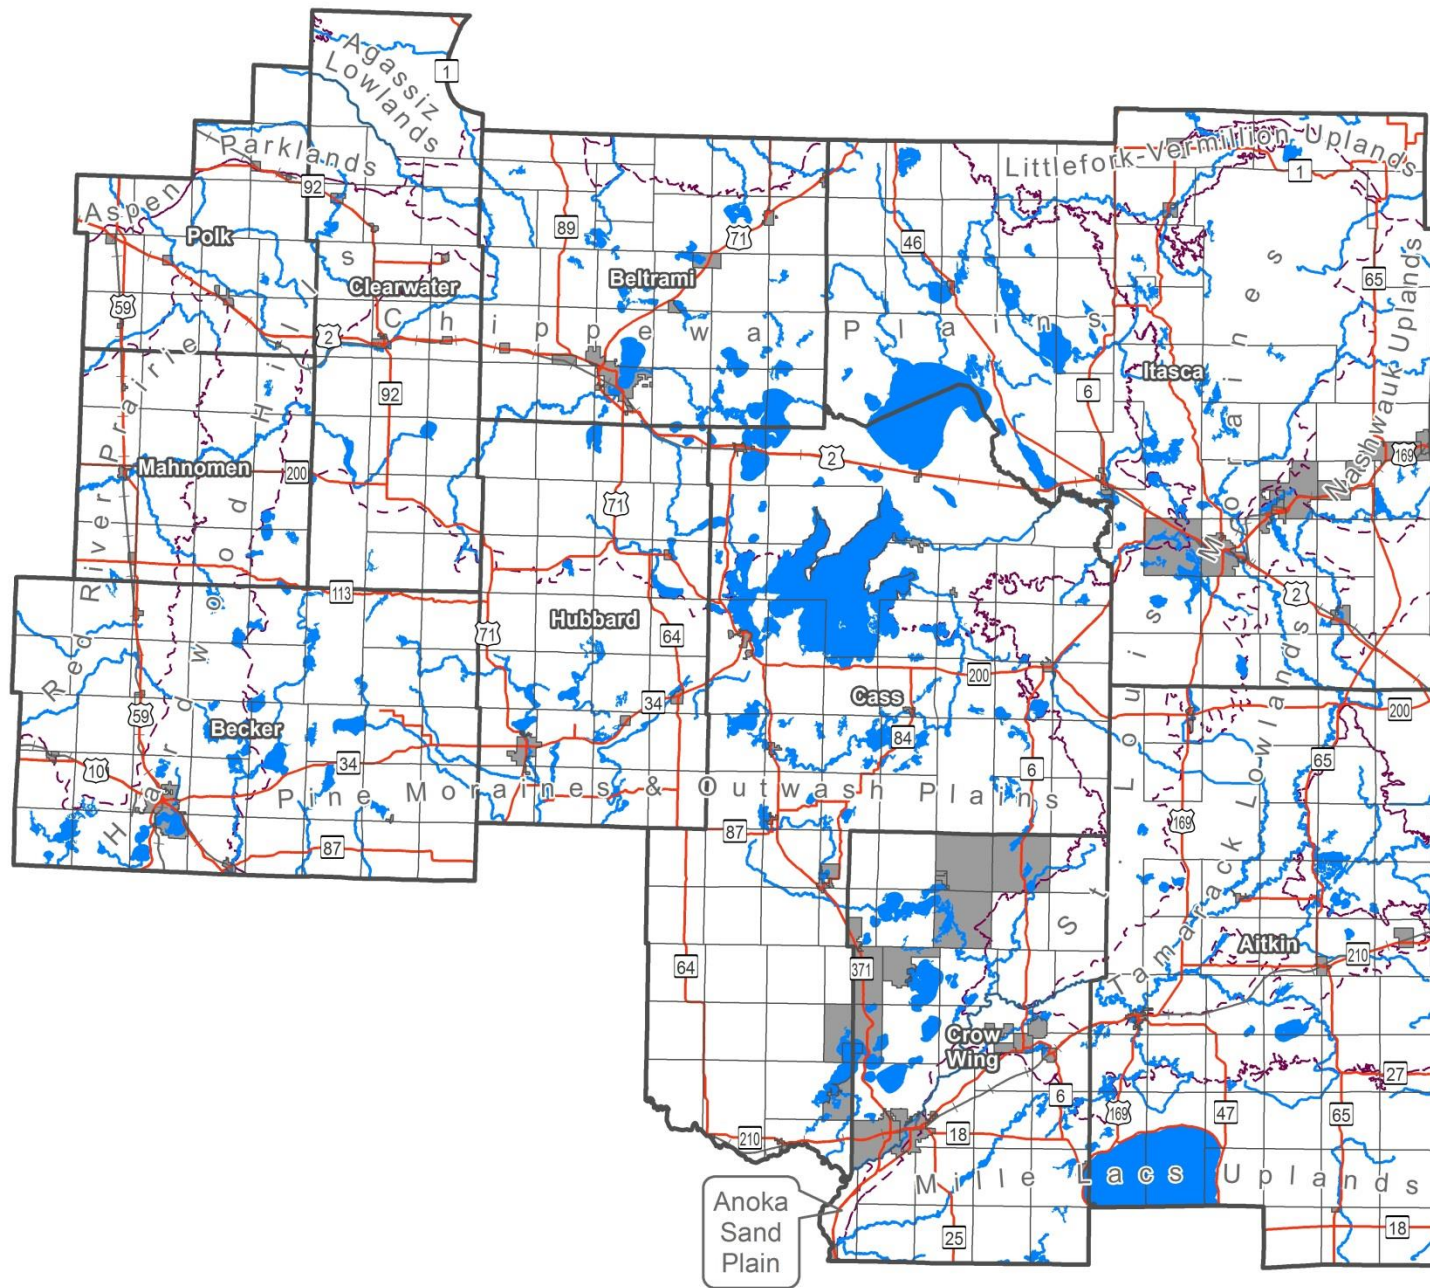

The purpose of this document is to provide geographic data as a reference for the Minnesota Forest Resources Council's Landscape Program. Included in this document are maps and tables regarding forest management topics for the North Central Landscape Region. When printed, the document is arranged with the maps on the left page and the tables regarding the map subject on the right page. This allows for easy side-by-side viewing of the maps and tables. In PDF format, the document contains bookmarks for easy navigation to map topics. Current geographical features are included on all maps (including presettlement land cover) to provide a spatial reference for the map user. Sources are listed for each map; more details regarding sources can be found in the bibliography at the end of the document. Boundaries for MFRC Landscape Regions are available upon request; users are encouraged to seek authoritative sources for other GIS data.

Disclaimer: The State of Minnesota, the Minnesota Forest Resources Council, nor their employees, make any representations or warranties, express or implied, with respect to the use of or reliance on the data provided herewith, regardless of its format or means of transmission. There are no guarantees or representations to the user as to the accuracy, currency, completeness, suitability or reliability of this data for any purpose. **THE USER ACCEPTS THE DATA "AS IS" AND ASSUMES ALL RISKS ASSOCIATED WITH ITS USE.** The Minnesota Forest Resources Council assumes no responsibility for actual, consequential, incidental, special or exemplary damages resulting from caused by or associated with, any user's reliance on or use of this data, even if appraised of the likelihood of such damages occurring.

DNR Mapped Native Plant Communities

North Central Landscape Region

DNR Mapped Native Plant Communities

- Acid Peatland System
- Complex community
- Fire-Dependent Forest/Woodland System
- Floodplain Forest System
- Forested Rich Peatland System
- Lakeshore System
- Marsh System
- Mesic Hardwood Forest System
- Open Rich Peatland System
- River Shore System
- Upland Prairie System
- Wet Forest System
- Wet Meadow/Carr System
- Wetland Prairie System

Other Features

- County Boundaries
- Municipal Boundaries
- Highways
- Railroads
- Lakes
- Rivers
- ECS Subsections

Note: DNR Mapped Native Plant Communities include data from Minnesota Biological Survey (MBS), Forestry native plant community data, Wildlife Management Areas land cover data, disturbed lands that intersect MBS Sites of Biodiversity Significance, non-native land cover for MNDNR Parks and Trails administered lands, land cover on all lands within statutory boundaries of MN State Parks, State Recreation Areas and State Waysides.

Change in Relative Abundance of Aspen by ECS Land Type Table

Aspen Abundance (1908-1990)	Acres	% of Total
Increase, > 10-fold	122,466	0.9
Increase, 5 to 10-fold	1,658,265	11.6
Increase, 3 to 5-fold	2,986,219	20.9
Increase, 2 to 3-fold	4,470,867	31.2
Some increase	3,458,658	24.2
Some decline	568,064	4.0
Decline, 2 to 3-fold	75,059	0.5
Decline, > 10-fold	332,062	2.3
Rare as bearing tree	638,701	4.5
Totals (Land Type Areas)	14,310,360	100.0

This analysis compares the relative abundance of trees using two sets of data, the Public Land Survey (PLS) and the 1990 Forest Inventory Analysis (FIA). PLS records were collected between 1846 and 1908 in Minnesota, thus PLS surveys predate significant settlement and logging in most areas and provide a comprehensive sampling of trees at that time. Tree species and their diameters, azimuths, and distances from survey corners were recorded at every section and quarter-section corner where trees were available.

FIA data were collected between 1986 and 1991 on randomly located plots in forests. Each plot consists of ten points. At each point tree species, and their diameters, azimuths, and distances from point center were recorded where trees were available. Thus FIA points differ from PLS survey corners with regard to the number of trees sampled (usually more) and no requirements to locate a tree in all four cardinal quadrants (NE, SE, SW, NW). A subset of the FIA point data was created to replicate the PLS data by selecting the nearest tree (greater than 4 inches d.b.h.) in each cardinal quadrant. PLS survey corners and FIA points were summarized by their occurrence in 291 Land Type Association (LTA) map units for the state. For each LTA, relative abundance of tree species were calculated and compared.

Disclaimer:
 Highest and Best Use (HBU) classifications are an initial assessment of potential future management options to secure long-term maximum revenue from school trust lands. The HBUs represented here will be used to inform decisions regarding management of school trust fund lands, but do NOT indicate that a management decision has been made by the DNR. Mineral Estate and Real Estate classifications are extremely preliminary and represent lands that showed any possible potential for these uses with no filters for factors that would exclude them. Additional analysis will be conducted on both classifications to reclassify lands that could not be used for mineral exploration/extraction or real estate (e.g. due to proximity to public waters).

The layer from the DNR Division of Ecological and Water Resources used to create this map/table is intended to provide a base inventory of selected invasive aquatic species in waters of the state of Minnesota. This layer is not a complete statewide survey for aquatic invasive species. Five of the selected species are found in waters within the North Central Region: Eurasian Watermilfoil, Faucet Snail, Flowering Rush, Spiny Water Flea, and Zebra Mussel. For the official complete list, see the Designated Infested Waters list available at http://files.dnr.state.mn.us/eco/invasives/infested_waters.pdf.

Vetch, Crown	42
Vetch, Hairy	70

Observations were made between 5/27/2004 and 6/26/2014. Each observation may vary for the number of plants observed, distribution of plants, and acres infected. Separate observations may represent the same location, therefore the count of observations may over-represent the distribution of a species.

Annual Average Daily Traffic Table

Route Type	Annual Average Daily Traffic
US Highway	960,350
MN Highway	1,547,345
County State Aid Highway	1,298,350
Municipal State Aid Street	830,385
County Road	150,755
Township Road	1,685
Municipal Street	22,930
Indian Service Road	870
Total North Central Region	4,812,670

Annual Average Daily Traffic (AADT) is the number of vehicles that travel a section of road per day (averaged for 365 days in one year). MNDOT measures traffic for road sections every 2-4 years. Note that AADT is per section of road. If more sections of road exist for a Route Type, more AADT will be reported for that Route Type in the table above. For a normalized comparison of the amount of traffic on each route type, refer to the Annual Average Daily Vehicle Miles Traveled.

Annual Average Daily Vehicle Miles Traveled Table

Route Type	Length (miles)	Annual Average Daily Vehicle Miles Traveled
US Highway	581.5	3,208,983
MN Highway	1240.4	3,642,242
County State Aid Highway	3837.4	2,364,223
Municipal State Aid Street	93.6	249,304
County Road	1910.1	274,155
Township Road	16.2	3,554
Municipal Street	3.1	10,817
Indian Service Road	3.0	2,649
Total North Central Region	7685.4	9,755,927

Annual Average Daily Vehicle Miles Traveled (AAD VMT) is the number of vehicles that travel a section of road per day (averaged for 365 days in one year) multiplied by the length of the section of road. If 2 vehicles traveled a 2 mile section of road every day over the course of one year, the AAD VMT for that section of road would be 4. The AAD VMT should be used when comparing routes for traffic volume given that it provides a normalized comparison for traffic measurements (the Annual Average Daily Traffic count can be skewed by the presence of multiple sections of a Route Type).

Heavy Commercial Annual Average Daily Traffic Table

Route Type	Heavy Commercial Annual Average Daily Traffic
US Highway	72,305
MN Highway	78,885
Total North Central Region	151,190

Heavy Commercial Annual Average Daily Traffic (HCAADT) is the number of trucks with at least 2 axles and 6 tires that travel a section of road per day (averaged for 365 days in one year). MNDOT measures traffic for road sections every 2-4 years. Note that HCAADT is per section of road. If more sections of road exist for a Route Type, more HCAADT will be reported for that Route Type in the table above. For a normalized comparison of the amount of traffic on each route type, refer to the Heavy Commercial Annual Average Daily Vehicle Miles Traveled map.
