

# SNAPSHOT | Investing in Our Roads and Bridges

2015 Budget for a Better Minnesota

Governor Dayton's transportation proposal would invest \$6 billion over the next ten years to address the state's highway funding deficit, invest \$2.356 billion in local government transportation projects, and provide \$2.92 billion for transit systems across Minnesota. The Governor's plan would create an estimated 119,000 new jobs, and build the infrastructure necessary to meet the demands of a growing population and an expanding economy.

The table below outlines more than 600 priority state road and bridge projects that would be made possible under Governor Dayton's proposal. Projects are sorted by county. The engineers and planners at MnDOT compiled this list of projects, and their cost estimates, based on careful study of the state's anticipated road and bridge improvement needs over the next ten years. Cost projections are based on conservative estimates, and provide a low and high range for each project.

## Potential Priority State Highway Investments, by County

<b>Various</b>	Operations / Maintenance	Various	Expand preventative maintenance program; improve reactive maintenance activities; faster delivery of new program	<i>\$ 306,000,000 – 306,000,000</i>
<b>Various</b>	Roadside Infrastructure	Various	Invest to meet recommended condition targets for aging roadside infrastructure, (e.g. culverts, overhead signs, signals) throughout the state	<i>\$ 253,300,000 – 309,590,000</i>
<b>Various</b>	Traveler Safety	Various	Focus investment on low to mid cost safety improvements along corridors and at intersections; geometric improvements and systemic safety improvements to be implemented at key locations throughout state; replace older highway / railroad crossing gate and signal systems	<i>\$ 153,980,000 – 188,190,000</i>
<b>Various</b>	Twin Cities Roads	Various	Strategically add capacity through improvements to intersections, interchanges, and lane additions to improve continuity; project selection subject to public involvement and transportation studies.	<i>\$ 216,870,000 – 265,060,000</i>
<b>TOTAL</b>				<i>\$ 4,163,920,000 – 7,855,220,000</i>

**Notes:**

1. "Significant Roadway Surface Improvements" include extending pavement life by replacing all or part of the pavement surface, widening shoulders, upgrading guardrail, lights, culverts, signs and adding turn lanes where warranted.
2. "Upgrade planned project to a longer-life improvement" may include increasing the pavement thickness or using a longer lasting pavement design or material.
3. Pavement preventative maintenance may include crack / joint sealing, chip sealing, minor concrete repairs, and thin bituminous overlays <2".
4. Bridge preventative maintenance may include cost-effective strategies to maintain bridges in good condition including sealing bridge decks, flushing decks and drains, repairing bridge joints, etc.
5. Mobility improvements include expanding roads from 2-4 lanes and adding lanes and expanding the MnPASS network in the Twin Cities.
6. Identified pavement projects are based off expected rates of deterioration as of 2015 and may change due to actual condition realized over the next 10 years. Exact plans for individual projects have not been developed and specific improvements are subject to change; project cost ranges reflect this uncertainty.
7. Bridge projects are based off expected rates of deterioration as of 2015 and may change due to actual condition realized over the next 10 years. Bridge cost ranges are based on square footage categorized into small, medium and large bridges (<20,000 square feet; 20,000-100,000 square feet; and >100,000 square feet) as well as preventative maintenance improvements versus the more costly work to repair or replace the bridge. As projects have not yet been fully developed, the range for repair / replacement varies greatly as exact fix is not yet determined.
