

2025 Community Needs Surveys

ADULT SURVEY DATA BOOK

Conducted by

Prepared in Partnership with

Foreword

The Council on LGBTQIA2S+ Minnesotans is pleased to share this Adult Survey Data Book from Minnesota's 2025 LGBTQIA2S+ Community Needs Surveys.

Behind the numbers in these pages are thousands of people who chose to share something about their lives. Taken together, their responses tell us about where LGBTQIA2S+ Minnesotans find support, the barriers they encounter, the challenges they carry, and what they need to thrive. We are deeply grateful to every person who participated in this assessment and to the many community organizations, advocates, leaders, and partners whose relationships, expertise, and trust made it possible for this project to reach communities across Minnesota.

This Data Book provides a deeper look at what people shared in the Adult Community Needs Survey. By presenting findings across different identities and communities, it helps us see where experiences differ, where disparities exist, and where there is more to learn about what shapes the wellbeing of LGBTQIA2S+ Minnesotans.

We hope these pages are more than a collection of tables and percentages. We hope people use them to make disparities visible, strengthen their work, better serve LGBTQIA2S+ communities, and make informed decisions about where resources and action are needed most.

These data are not the end of this work. Through deeper analysis, community sensemaking, and continued engagement across the state, we will keep working to understand what these findings mean and translate what we learn into priorities and action. But this work extends far beyond the Council. Across Minnesota, communities, organizations, advocates, service providers, researchers, and policymakers are already working to improve the lives of LGBTQIA2S+ people. Moving this work forward will take all of us building on what is already working, learning from one another, and working in partnership to turn data into progress.

With Gratitude,

The Council on LGBTQIA2S+ Minnesotans

Thank you to our council members, staff, and community partners

Council members

The following council members served during the Community Needs Assessment period and provided leadership, guidance, and support throughout various stages of the project. Thank you:

Oby Ballinger	Francesca Mounkoka Goma
Bibi Black	Max Hall
KB Brietzke	Ogichidaakwe (Selena Garza)
Theo Casio	Senator Lindsey Port
Representative Brion Curran	Dr. Jonathan Poquiz
Phil Duran	Kat Rohn
Reneka Evans	Alyson Rodway
Representative Leigh Finke	Randy Stillday
Dr. Jessica Garcia	

Staff

This work was led and supported by staff with the Council on LGBTQIA2S+ Minnesotans and Management Analysis and Development who contributed across multiple phases of the Community Needs Assessment, from project planning and community engagement to implementation, analysis, and reporting.

Angelica Gentile Operations	Sheila Nezhad Engagement
Henriët Hendriks and consultant team Management Analysis and Development	Brittany Wallman Communications
Mars Kamenski Engagement	Kelsey Waits Research
Alexander Lussenhop Research	Emma Watts Executive Director

Community partners

This Community Needs Assessment was supported by a broad network of partners across Minnesota whose time, expertise, and outreach efforts helped make this work possible. Partners provided guidance and feedback, promoted the Community Needs Surveys, distributed materials, shared information, and helped connect us with Minnesota's LGBTQIA2S+ communities.

Because this effort relied heavily on grassroots support and community networks, there are likely individuals and organizations whose contributions occurred behind the scenes or in ways MNQT may not have fully captured. While we have done our best to recognize those who contributed, we know this list may not include everyone, and we extend our gratitude to all who helped make this project possible.

Introduction

About the Community Needs Assessment

In 2023, the Council on LGBTQIA2S+ Minnesotans (referred to in this data book as MNQT or the Council) was established to work toward economic, social, legal, and political equality for Minnesota’s community of people who identify as lesbian, gay, bisexual, transgender, gender expansive, queer, intersex, asexual, and/or Two-Spirit. Consistent with its statutory mandate, the Minnesota Legislature directed the Council to conduct, or contract for, studies that identify challenges facing LGBTQIA2S+ Minnesotans and inform solutions across areas including education, employment, human rights, health, housing, social welfare, and related policy issues.

The Minnesota LGBTQIA2S+ Community Needs Assessment is the Council’s first major effort to fulfill that charge and better understand the experiences and needs of LGBTQIA2S+ Minnesotans across the state by collecting data that informs policy, administrative, and funding recommendations for the Governor, state legislature, and state agencies. The Community Needs Assessment includes three components:

1. **Community Needs Surveys:** A survey of adult LGBTQIA2S+ Minnesotans age 18 and older and a survey of parents/caregivers of LGBTQIA2S+ youth age 17 and younger. Data collection was completed in 2025.
2. **Community Conversations:** A series of 12 focus-group style conversations with individuals from subsets of the LGBTQIA2S+ community who face unique barriers and disparities and are historically underrepresented. Data collection was completed in 2025.
3. **Organization and Provider Survey:** An online survey for organizations and providers that serve or work with the LGBTQIA2S+ population in Minnesota. Data collection is ongoing at the time of the release of this data book in September 2026 and will be completed by end of 2026.

A Community Needs Assessment by and for LGBTQIA2S+ Minnesotans is important, as this community remains underrepresented in data related to health care outcomes, barriers to care, and life experiences such as discrimination and violence. These gaps are further compounded by inconsistent or limited collection of sexual orientation and gender identity data across major federal and other data sources. Without comprehensive and inclusive data, policymakers, service providers, and advocates have fewer tools to identify needs, understand disparities, and advocate for programs and services that support LGBTQIA2S+ Minnesotans.

While the Community Needs Assessment provides critical insights to improve the lives of Minnesota’s LGBTQIA2S+ community, it was not designed to evaluate specific programs or service delivery systems, nor does it assess the implementation or enforcement of policies across Minnesota.

This data book provides a first look at some of the differences between groups from the Community Needs Surveys. Additional survey analyses, findings from other assessment components, and future reports will continue to deepen and expand upon the findings presented here.

Survey context and implication

Data collection for the Community Needs Surveys occurred between March and December 2025. This data book is intended to provide insight into the experiences, concerns, and challenges faced by LGBTQIA2S+ Minnesotans. The data gathered from these Community Needs Surveys should be interpreted within the broader social, cultural, and political context in which the surveys were conducted. Throughout 2025, LGBTQIA2S+ communities – particularly transgender communities – faced a record-breaking number of policy actions limiting or attempting to limit rights, access, and visibility. In 2025, over 1,000 anti-transgender bills were introduced across the United States, a record high.¹ President Trump issued several executive orders and federal actions that altered or sought to alter policies related to gender identity, gender-affirming care, military service, and federal recognition of sex and gender. A number of these actions were subsequently challenged through litigation and subject to injunctions or ongoing court review. At the same time, violence against members of the transgender community also increased.² As with any needs assessment, the broader environment in which data are collected may shape respondents' experiences, perceptions, and willingness to engage.

This adult survey data book is also being released during a period of significant changes in the policy and data landscape affecting LGBTQIA2S+ communities. Federal actions in 2025 modified, reduced, or eliminated entirely the collection of sexual orientation and gender identity measures in federal surveys, datasets, and databases, which may affect the availability of information used to understand LGBTQIA2S+ populations over time. This underscores the importance of this needs assessment and future efforts to ensure the LGBTQIA2S+ community is visible and well represented in state data collection. The policy and contextual information presented in this data book is current as of summer 2026.

Limitations

While the Community Needs Surveys provide an important snapshot of the experiences of LGBTQIA2S+ people in Minnesota across a range of life experiences, a few limitations should be considered when interpreting the data.

First, the Community Needs Surveys used a convenience sample of LGBTQIA2S+ adults and parents/caregivers of LGBTQIA2S+ youth in Minnesota who chose to participate. As a result, findings should be understood to reflect the experiences and perspectives of survey respondents only. The survey data do not statistically represent the experiences of all LGBTQIA2S+ Minnesotans. Even so, the results provide valuable insight into experiences of the 6,919 adult LGBTQIA2S+ Minnesotans and 385 parents/caregivers of LGBTQIA2S+ youth in Minnesota who completed the survey. The survey data can help identify patterns, areas for further exploration, and priorities for future research, policy discussions, and community action.

¹ [Anti-trans Legislation Tracker](#)

² [2025 GLAAD ALERT Desk Report | GLAAD](#)

LGBTQIA2S+ people are estimated to make up approximately 11% of Minnesota’s adult population,³ making random population-based sampling difficult and resource intensive. Instead, MNQT used an opt-in approach combined with extensive outreach. Specifically, MNQT received weekly reports during the data collection period that included information about respondents’ demographic variables, including age and race/ethnicity. In addition to broad advertisement and outreach, MNQT used targeted advertising and recruitment in partnership with community-based organizations to increase the number of responses from demographic groups that were responding at lower rates according to the weekly reports. For example, MNQT and our partners did additional outreach in Greater Minnesota. Recruitment relied heavily on MNQT’s relationships with community partners that serve different segments of Minnesota’s LGBTQIA2S+ population. MNQT also placed ads in targeted media and social media.

Second, the Community Needs Surveys were administered online, meaning participation depended on access to connected devices or internet and cellular data services. These recruitment and participation methods may have influenced who was able or likely to participate.

Third, information about the experiences of minors was gathered through a survey of parents/caregivers who were able and willing to report on their children’s experiences and needs. Because responses relied on parent/caregiver participation, the findings do not fully reflect the experiences of all LGBTQIA2S+ youth, including youth who are not “out” to family members or whose family circumstances, such as lack of acceptance, may affect their willingness to participate in this survey. While survey data were not collected directly from LGBTQIA2S+ youth, MNQT held two community conversations with youth; participation required parental consent. Insights from those discussions will be included in future reports. Additional survey data from LGBTQIA2S+ youth in Minnesota is available through the 2025 Minnesota Student Survey.⁴

Fourth, the median amount of time people took to complete the survey was 22 minutes. The surveys included over 100 questions. The overall length of the surveys may have prevented some potential respondents from completing it.

Finally, while there were sufficient responses across many groups to examine disparities, several communities of color were underrepresented relative to Minnesota’s Census population data (census comparisons provide context but do not indicate that the sample is representative). The issue areas addressed in our report, such as health and housing, are impacted by many identity factors in intersectional ways and our research included multiple data collection and outreach techniques to help create a fuller picture of the experiences of LGBTQIA2S+ people across race, gender, ability, age and geography. MNQT made intentional efforts to reach communities that have historically been excluded from research and underserved by government. MNQT established a standard that at least 50% of paid survey outreach partnerships be with organizations serving these historically excluded and underserved communities, including communities of color. In addition, MNQT collected qualitative data between April and June 2025 via 12 community conversations, including dedicated conversations with Black and African American; Latine; Asian and Pacific Islander; and Indigenous and Two-Spirit communities to deepen our understanding beyond the survey data. Data from these conversations will be released as analysis is completed throughout coming months.

Methods

Survey development

Conversations with MNQT Council members, community organizations, and community leaders informed the key topic areas included in the Community Needs Surveys. MNQT also reviewed questions from LGBTQIA2S+ Needs Assessments conducted in other states and broader statewide surveys administered in Minnesota. Following the development of the draft surveys, MNQT engaged organizations that serve LGBTQIA2S+ Minnesotans in a series of information sessions about the Community Needs Assessment. More than 100 individuals participated and were offered opportunities to review draft survey instruments and provide feedback.

The State of Minnesota Enterprise Translation Office (ETO) translated the final surveys into Hmong, Somali, and Spanish, which are the three most commonly spoken non-English languages in Minnesota. Words related to queer identities did not translate easily into Somali and Hmong, so extra care was taken to define these terms. In addition, each survey question was translated into American Sign Language (ASL) through video recordings integrated into the surveys.

In both surveys, participants were informed that their responses are anonymous, that they could refuse to answer any question, and that they could discontinue participation at any time. Because some survey topics addressed potentially sensitive experiences such as discrimination or violence, resource information was made available throughout the survey.

Most of the survey questions were multiple choice with pre-determined response options. Many of these questions also included write-in response options. Many questions also included response options such as “Not applicable” or “Prefer not to answer.” Three open-ended questions at the end of the survey allowed respondents to write in their responses.

To be eligible for the **adult survey**, participants were required to identify as LGBTQIA2S+, be age 18 or older, and reside in Minnesota at the time of the survey.

To be eligible for the **parent/caregiver survey**, participants were required to identify as the parent/caregiver of a member of the LGBTQIA2S+ community age 17 or younger and currently live in Minnesota. Individuals who did not meet these eligibility criteria were not included in the surveys.

The adult survey asked respondents about their experiences seeking support for various needs and concerns: feelings of physical and emotional safety; connections to the LGBTQIA2S+ community; and demographic information including sex, sexual orientation, and gender identity. The parent/caregiver survey asked respondents to report on their child’s experiences seeking support for various needs and concerns: feelings of physical and emotional safety; school experiences; connections to the LGBTQIA2S+ community; and demographic information including sex, sexual orientation, and gender identity of their child. The final two questions on both surveys were open-ended and asked respondents what brings them or their child the most joy in life and what their greatest fears are for themselves or their child as a member of the LGBTQIA2S+ community.

Privacy protection

Throughout the survey process, protecting participant confidentiality was paramount. As a state agency, MNQT is subject to public data requirements. If data were requested from the survey, MNQT could not guarantee the removal of variables from a dataset, even in cases where retaining those variables could increase the risk of reverse identification (i.e., identifying individual respondents based on their demographic characteristics or other data they provided). To protect respondents' identities, MNQT contracted with Minnesota Management Analysis and Development (MAD) to collect and maintain the data on behalf of MNQT.

Minnesota Management Analysis and Development (MAD) is a division of Minnesota Management and Budget (MMB) that provides consulting services for state agencies. Unlike most state agencies, MAD has additional legal data protections under the Minnesota Government Data Practices Act (Minnesota Statutes §13.64) that allow them to keep private certain data collected for consulting projects:

- **Public Data Requests:** Under Minnesota law, most state agency data is public, but data collected and maintained by MAD is not subject to public records requests in the same way. This means information that could reasonably be used to identify an individual from their response is considered private data under Minn. Stat. 13.64, meaning MAD will not share it with others except as provided by law, or unless and until MAD shares data with other state agencies.
- **Confidential Research Protections:** MAD follows strict protocols that allow certain data to be classified as non-public or confidential.
- **Removal of Potentially Identifiable Information:** Before MAD shares survey data with MNQT or any other entity, potentially identifiable information is removed from responses. For example, if a respondent named their child or their employer in an open-ended question, MAD would remove the name before providing the data file.

Survey questions were carefully developed with privacy in mind. Certain demographic questions – such as age, city of residence, ethnicity, race, and gender – can increase the risk of reverse identification, where a person's responses could be used to determine their identity. To minimize this risk while still gathering meaningful data, MNQT made the following key decisions:

- **Limited availability of disaggregated racial and ethnic data:** To protect participant privacy, particularly in regions of Greater Minnesota with smaller and less diverse populations, race and ethnicity data were collected using broader categories only. For example, respondents who identified as "Asian or Asian American," were not prompted to select more specific ethnicity or cultural identities (e.g., Hmong, Indian, Chinese). As a result, this survey analysis will not be able to examine differences within broader racial and ethnic categories. MNQT recognizes the importance of ensuring data collection approaches better reflect the full diversity of identities and experiences within the LGBTQIA2S+ community. In future efforts, MNQT will continue working with researchers, experts, and community members to identify approaches that balance meaningful representation with privacy considerations. MNQT also recognizes that community engagement extends beyond research and will continue creating opportunities to learn from communities through additional forms of engagement.

- **Limited geographic information:** While LGBTQIA2S+ people live in all communities across Minnesota, collecting detailed geographic information, such as ZIP code or city of residence, can increase the risk of respondent identification. This risk is increased for Greater Minnesota residents where smaller and less diverse populations can make individuals more identifiable based on minority identities, especially when multiple demographic variables can be triangulated. To help protect privacy, geographic data collection and reporting were intentionally limited. While respondents identified their region of Minnesota, that information was not shared with MNQT by MAD. Instead, MNQT received a binary indicator showing whether respondents lived within or outside the seven-county Twin Cities metro area. Respondents also had the option to identify their community type (e.g., metro, suburban, rural, or Tribal community).

Data collection

MNQT used a broad, multi-channel outreach strategy designed to reach LGBTQIA2S+ community members across Minnesota for survey recruitment. Promotion efforts combined digital and in-person approaches and prioritized engagement through trusted community organizations, culturally specific groups, grassroots networks, and community leaders. Additional outreach efforts focused on populations within the LGBTQIA2S+ community that have historically been underrepresented or underserved in research and public engagement processes, such as BIPOC communities, elders, Greater Minnesota residents, and people living with disabilities. MNQT also engaged government agencies, educational institutions, businesses, Pride organizations, and other community partners to expand awareness and encourage participation.

Survey promotion included paid and organic social media campaigns, print and digital advertising, radio and newsletter placements, earned media, partner toolkits, and physical outreach materials. More than 100 in-person and virtual engagement events were conducted or attended by MNQT across Minnesota. As a new and small state agency, MNQT's reach and capacity were limited. To address this limitation, MNQT formed paid partnerships with organizations and trusted messengers to share information through existing relationships and networks, with the goal of increasing awareness and broadening survey reach across diverse populations.

The surveys were primarily administered online through the Qualtrics platform. Paper surveys in English were available at Queermunity, a community gathering space in Minneapolis accessible by public transportation. Completed paper surveys were submitted through a secure lockbox and later entered into Qualtrics by MNQT staff.

The English versions of the surveys were administered March 14, 2025, through December 31, 2025. The Spanish, Hmong, and Somali versions of the surveys were administered June 16, 2025, through December 31, 2025. The American Sign Language (ASL) version of the surveys was administered June 21, 2025, through December 31, 2025.

The following table illustrates the number of people who started and completed the survey and other information about survey completions.

1. Survey respondents

	Adult survey	Parent / caregiver survey
Total number who started the survey	8,652	447
Total number who were eligible	7,213	385
Total number who fully completed the survey	588	32
Total number who completed at least half of the survey	5,987	339
Total number of eligible surveys used in analysis ^a	6,919	385
Number of English surveys completed	6,907	385
Number of Hmong surveys completed	0	0
Number of Somali surveys completed	0	0
Number of Spanish surveys completed	7	0
Number of ASL surveys completed	5	0
Median time to complete	22 minutes	20 minutes

^a Includes survey respondents who completed at least one demographic question and one or more of the topical questions.

Data analysis

Because all survey questions were optional, the number of respondents varies by question. Questions relevant only to specific groups of respondents, such as questions intended for transgender respondents, may have fewer respondents, because the skip logic for the survey was set up so only respondents who identified as transgender (or the parent/caregiver of a transgender child) were asked questions intended for transgender respondents. The tables throughout this adult survey data book show only the valid responses for that question, with the number of valid responses (N) included in the chart or table title. All respondents that skipped the question due to skip logic in the survey, those who left the question blank, and those who marked an invalid response such as “Prefer not to answer” are not included in the N and were not included in the denominator when calculating the response percentages for each question.

This data book shows the responses to every adult survey question broken out by respondents’ demographic characteristics. Future reports will include additional analyses of patterns and differences across subgroups of respondents and will also include recommendations. Reporting has been split into phases to provide timely information without sacrificing complete and rigorous analysis. This adult survey data book does not include any data or results from the parent/caregiver survey, Community Conversations or the Organization and Provider Survey. This information will also be provided in future reports that can be found on [The Council’s website](#).

How to read the data tables

The tables in this Data Book provide results from the Adult LGBTQIA2S+ Community Needs Survey broken down by different demographic groups. Each table shows breakdowns using the same 10 demographic categories: region, community type, age, sexual orientation, gender identity, intersex status, Two-Spirit status, race/ethnicity, income, and years lived in Minnesota. The tables can be used to look more closely at the experiences of these specific communities and, in some cases, compare experiences across demographic groups. There are several important things to keep in mind as you explore the data:

- **A reminder about survey limitations.** It is important to keep in mind that our sample is not statistically representative of the LGBTQIA2S+ population in Minnesota because survey respondents were not randomly selected. Even so, the results provide valuable insight into the experiences of thousands of LGBTQIA2S+ Minnesotans and will provide guidance for future research, policy discussions, and community action. See the Limitations section for more discussion.
- **Each table represents one survey question.** The survey question appears at the top of the table. Response options are shown across the columns, and demographic groups are shown in the rows. The far-right column shows the number of respondents included in each row.
- **Percentages generally add up to 100% across each row.** The exception is questions where respondents could select more than one response. For those questions, percentages may add up to more than 100%. For questions where respondents could select more than one response, the survey question at the top of the table will note: "Select all that apply."
- **Small groups are suppressed to protect confidentiality.** Data were suppressed when fewer than 20 respondents are represented in a single row to ensure confidentiality is protected.
- **Each respondent appears only once within each demographic section.** Many in the LGBTQIA2S+ community may identify with more than one sexual orientation or gender identity, and respondents were able to select all identities that applied to them in these demographic questions. For this Data Book, however, we developed broader categories that bring together identities with shared or related experiences. When respondents selected identities that fell into more than one of these categories, we used consistent rules to determine which category they would be included in for these tables. This was necessary to allow us to make comparisons between groups and examine differences and disparities in respondents' experiences without counting the same respondent in multiple groups within a comparison. As a result, each respondent appears in one category within each demographic group. This approach is specific to the demographic comparisons in this data book. The summary report and other reports from this project present results across all response options.
- **Gender identity results include both an overall transgender category and more specific transgender categories.** *Trans-identifying of any gender expression* is an umbrella category that includes all respondents who identified themselves as transgender. It is intended to allow comparison of transgender respondents overall with groups such as cisgender men and cisgender women. More specific categories, such as trans man, trans woman, and trans-identifying with non-binary or gender expansive gender identity, allow readers to look more closely at experiences within transgender communities and can be compared with other gender identity groups. Because these respondents are also included in the *Trans-identifying of*

any gender expression category, the specific transgender categories should not be compared directly with the umbrella category.

- **Two-Spirit and intersex identities are represented as distinct demographic variables.**
 - **Two-Spirit.** The survey included Two-Spirit as a response option under both the sexual orientation and gender identity questions. For this Data Book, however, Two-Spirit is presented as its own demographic variable. This recognizes Two-Spirit as a culturally specific Indigenous identity that does not have a direct translation to the demographic categories commonly used in Western research. It also avoids separating Two-Spirit respondents between sexual orientation and gender identity categories and allows us to look more holistically at the experiences of respondents who identified as Two-Spirit as a whole. Results are presented for all respondents who selected Two-Spirit, as well as all Two-Spirit respondents who identified as American Indian or Alaska Native. Because most respondents who selected Two-Spirit also selected another sexual orientation and/or gender identity, they remain included in the sexual orientation and gender identity categories as well.
 - **Intersex.** The survey included "intersex" as a response option within the gender identity question. However, following review of survey data and consultations with intersex advocates, we determined that presenting intersex as its own demographic variable would more accurately represent respondents' identities and experiences. Nearly all respondents who selected intersex also selected another gender identity. Treating intersex as a gender identity category in the data tables would therefore require either grouping respondents as intersex at the expense of the other gender identity or grouping them by that gender identity and losing the ability to examine the data of intersex respondents all together. Presenting intersex separately allows us to do both: examine the experiences of intersex respondents as a group while also representing them within the gender identity categories they selected.

Definition of Terms

We have provided definition of key terms to assist readers in understanding terminology related to LGBTQIA2S+ identities. It is important to remember that language within and about the LGBTQIA2S+ community is constantly evolving, may change rapidly, and some terms may mean different things to different people. The terms and definitions we have provided are meant to be a starting point for discussion and understanding of how these terms are used in the time and culture that this data book was written. Understanding which identities co-occur most frequently will provide important insights for service providers, advocates, and policymakers.

We used the following sources for these terms, in some cases copying directly:

- [Glossary of Terms: LGBTQ | GLAAD](#)
- [Glossary of LGBTQIA+ Terms | LGBTQ Resource Center | Georgetown University](#)
- [LGBTQIA Resource Center - LGBTQIA Resource Center Glossary](#)

For the Two-Spirit definition, we used: [Two-Spirit: A Cultural Heritage](#)

Agender: Describes a person who experiences an absence of an internal gender identity or who has very little experience of a gender.

Aromantic: A romantic orientation generally characterized by feeling no, little, or conditional romantic attraction.

Asexual: Describes a person who has a complete or partial lack of sexual attraction to others. Asexuality exists on a spectrum, and asexual people may experience no, little, or conditional sexual attraction.

A-Spec: Stands for “asexual spectrum.” Encompasses a wide range of asexual identities and experiences, such as asexual, demisexual, or greysexual.

Bisexual+: Describes a person who has the potential to be physically, romantically, and/or emotionally attracted to people of more than one gender, not necessarily at the same time, in the same way, or to the same degree.

Cisgender: Describes a person whose gender identity corresponds to their sex assigned at birth.

Demisexual: Describes a person who feels sexual attraction only to people with whom they have an emotional bond. Demisexuals are included on the asexual spectrum.

Gay: A person who is emotionally, romantically, or sexually attracted to members of the same gender.

Gender Expression: External manifestations of gender, expressed through a person’s name, pronouns, clothing, haircut, voice, and/or behavior. Societies classify these external cues as masculine and feminine, although what is considered masculine or feminine changes over time and varies by culture.

Gender Identity (Gender): a person’s internal, deeply held knowledge of their own gender. A person’s gender identity may or may not align with the sex they were assigned at birth.

Gender non-conforming: Describes people whose gender expression differs from conventional expectations of masculinity and femininity.

Gender-expansive: Describes a person with a wider, more flexible range of gender identity and/or expression than typically associated with the binary gender system.

Genderfluid: A person who does not identify with a single fixed gender or has a fluid or unfixed gender identity.

Genderqueer: Describes a person whose gender identity and/or gender expression falls outside of the dominant societal norm for their assigned sex, is beyond genders, or is some combination of genders.

Heterosexual: Describes a person whose enduring physical, romantic, and/or emotional attraction is to people of a gender different than their own.

Intersex: Describes people who are born with a variety of differences in their sex traits and reproductive anatomy including genitalia, chromosomes, sex organs, hormone production, hormone response, and/or secondary sex traits.

Lesbian: Describes a woman whose enduring physical, romantic, and/or emotional attraction is to other women.

Multisexual spectrum/M-Spec: An umbrella term to describe sexual orientations that involve sexual attraction to more than one gender, such as bisexual, pansexual, and omnisexual.

Nonbinary: Describes a person who experiences their gender identity as falling outside the binary gender categories of man and woman. Nonbinary is an umbrella term that encompasses many different ways to understand one's gender.

Pansexual: Describes a person who has the capacity to form physical, romantic, and/or emotional attractions to any person, regardless of gender identity.

Queer: An umbrella term used to describe sexual/romantic orientations or identities that fall outside of societal norms.

Questioning: An adjective used by some people who are in the process of exploring their sexual orientation and/or gender identity.

Sexual Orientation: a person's enduring physical, romantic and/or emotional attraction to another person.

Transgender Man: A man who was assigned female at birth may use this term to describe himself.

Transgender Woman: A woman who was assigned male at birth may use this term to describe herself.

Transgender: Describes a person whose gender identity differs from the sex they were assigned at birth.

Two-Spirit: The term "Two-Spirit" has profound significance in many Native American and Indigenous cultures. It describes individuals who embody both masculine and feminine spirits, representing a unique cultural identity. The Two-Spirit identity encompasses a wide range of gender expressions and sexual orientations. Different tribal nations have various interpretations and definitions for Two-Spirit, and the Council recognizes that no brief definition fully reflects its significance or the diversity of Indigenous understandings of the identity.

Readers are encouraged to explore additional resources to expand understanding of the terms listed here.

Demographics

1. Where do you live in Minnesota?

	Within the 7-County Metro	Outside the 7-County Metro	# of respondents
