Grandview Unit Objectives and Directions

The objectives and directions of the Grandview Unit were discussed and it was agreed that the following kinds of objectives were to be strived for during the next three month period:

- 1) There will be an attempt to increase the excellent progress made in Behavior Modification programs. This happily will be done with! supplemental staff to increase the amount of time residents spend in DAC's and should occur some-time during November.
- 2) A second objective was to increase the number of referrals to appropriate community facilities and the necessity of the team to become more knowledgeable in services provided in these community facilities so as to make appropriate placements.
- 3) A major emphasis would be on the development of the medical rehabilitation programs in Seneca. An excellent start has been made in this area with the support of the ward staff, plus consultation from physical therapy and occupational therapy and efforts will be made to continue this.

The overall picture is one of a great deal of optimism as tremendous strides have been made in Grandview during the past year. The key factor has been the excellent work done by the Building Supervisor's, Mrs. Klement, Mrs. Crosby in particular. A desirable goal would be to develop some of the training material used in DAC's for dispersal to the remainder of our staff and others interested in this program. The entire Unit Team is to be congratulated and encouraged to go on with their high level performance.
