

## Downloading the MNsure App for IOS

### Download FileMaker Go 13

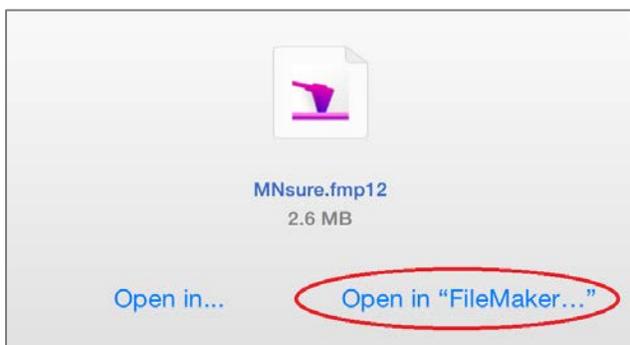

Download and install the free File Maker Go app on your smart phone and/or tablet. To find the app, go to the App store and look up “FileMaker.”

### Download the MNsure Client File

Open the Safari app on your device and download the MNsure client file from the [MNsure portal](http://www.mnsureportal.org/downloads/client/MNsure.fmp12). (<http://www.mnsureportal.org/downloads/client/MNsure.fmp12>).

Download the MNsure client file by tapping the “Open in FileMaker...” button and then confirm that you want to download the MNsure app.

### Apply for an Authentication Code

After you open MNsure in FileMaker, you'll be prompted to enter an authentication code. To obtain your authentication code, tap on the black “Go to Application” button featured below the authentication entry bar. You'll be redirected to an application – complete the application in its entirety and double-check you've entered the correct email address.

Your information will be sent for approval by an organizer or MNsure staff. After you have been approved, an authentication code will be sent to the email address you entered in the application page.

Note: You can also apply for an authentication code from [this location](http://www.mnsureportal.org/user-application) (<http://www.mnsureportal.org/user-application> ).

## **Authenticate Your Account and Access the MNsure File**

You're on the last step! Head back to the authentication page, enter the key you were emailed and tap "Authenticate."

Once entered you will be registered and ready to use MNsure on FileMaker Go. After authenticating your account, you will no longer need an internet connection to operate the app – you'll be able to work in the file offline. In order to upload the records you collect and download those uploaded to the server, you will, however, need an Internet connection.
